

CHUTES HACK MALAYSIA 2026

1st Place

Corporate Track

*It doesn't believe you. **Yet.***

A Live2D accountability companion that verifies your commitments with real evidence – and never does the work for you.

Now open source

"I'll ship it Friday."

You meant it. Friday came, nothing shipped, and the only thing that actually happened was **guilt**.

THE PROMISE

"I'll ship it Friday."

WHERE A CHECK SHOULD BE

nobody checks

THE OUTCOME

Still not shipped. Nothing changed.

Every AI coach trusts what you tell it. **None of them check.**

One commitment. Under 60 seconds.

Make your commitment

I will what you will deliver by

*I will **complete** the deliverable by the deadline*

One deliverable, one deadline, one source of proof. Nothing vague enough to hide behind.

1 · Commit

2 · Plan

3 · Check-in

4 · Verify

5 · Outcome

A win seeds the next commitment. A miss routes to recovery — **there is no streak to break.**

It can't move your **goalposts**.

HARD FIELDS — YOU ONLY

Deliverable

Deadline

Status

Stakes

User-set and audited. The AI reads them. It cannot write them.

SOFT CONTEXT — AI

Context

—

—

—

Exactly one field. That is the entire surface the model may touch.

1 of 5

fields on a commitment are writable by the model.
The other four are yours alone.

Three companions. Or **bring your own.**

Choose your companion

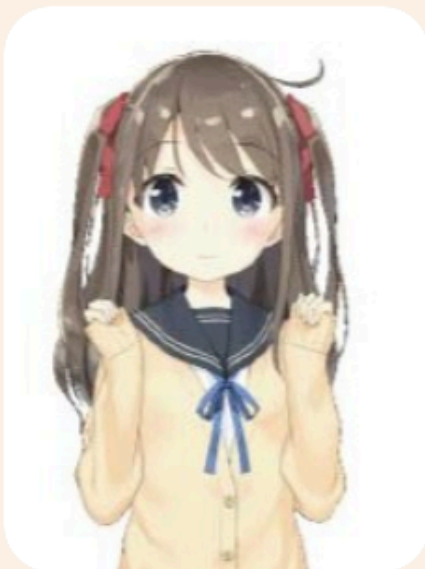

Your companion checks in with you, reviews your evidence, and gives you a verdict. Pick the one that fits how you want to be held to account.

Kawan

Skeptical Concierge

Candid, warm, slightly dry.
Believes in you because
you have proven it. Not
because you said so.

Adik

Gentle Cheerleader

Encouraging and kind.
Celebrates every step,
asks about obstacles with
genuine curiosity.

Cik Maid

Playful Taskmaster

Brisk, playful, expects
results. Gets things done
with a wink.

PixiJS + pixi-live2d-display + Cubism 4, wired into React 18 + TypeScript. Emotion drives expression and lip-sync live. Adding your own character is a model folder and a JSON persona.

It fetches the evidence **itself**.

It pulls the proof itself — you don't get to describe it.

GitHub commit

File

PASS

FAIL

UNCLEAR

Self-report is never accepted. And **"unclear"** never punishes you.

Built on Chutes.

01 TEE + attestation

Intel TDX confidential inference. Zero prompt logging.

02 Structured outputs

Strict JSON is the control plane — it drives product logic, not formatting.

03 Multimodal judging

A TEE vision model reads your screenshot and reasons about it.

04 Inline failover

Per-persona primary with failover routing, in a single call.

05 Sign in with Chutes

The user's own token is the Bearer. Every call bills their balance.

gemma-4-31B-turbo

DeepSeek-V3.2

Kimi-K2.6

Privacy, billing and product logic — one story.

KAWAN

*No one keeps a promise to a
cheerleader.
They keep it to a friend who **checks**.*
